

A Working List of the Birds of the Channel Islands

Glyn Young¹, Mark Lawlor, Tony Paintin, John Horton & Paul

This Working List includes details of all those bird species recorded in the (British) Channel Islands of Jersey (including Les Écréhous and Les Minquiers), Guernsey (including Herm, Jethou and Lihou), Alderney (including Burhou and the Casquets) and Sark (including Brecqhou) that have been accepted by the islands' respective ornithological committees. Some recent records may not be included, as the relevant committee has not yet verified them. Further details of each species or of individual records can be found in published reports or by contacting the committees directly (see below). Records are updated annually after individual islands' records committees have discussed the preceding year's reports. The report is currently updated to 31st December 2020 and the authors are grateful this year to Mick Dryden (Jersey), Phil Atkinson (Guernsey), Justin Hart (Alderney) and Richard Axton and Lynda Higgins (Sark) for their help in maintaining this list. Mick Dryden, Romano da Costa and John Horton kindly let us use their photographs. We are very grateful to Mark Atkinson and Jill Watson for their contribution in creating this list in 2006.

Status

To date it has been difficult for the authors to standardise the status of birds in the four islands as interpretation has often differed and coverage has been patchy. As a guideline, however, the following categories have been used to describe status:

Resident - recorded throughout the year

Breeding species

Occasional - has bred in most years

Rare - 1-10 pairs breed in most years

Scarce - 11-50 pairs breed in most years

Common - 51-500 pairs breed in most years

Very common - 500+ pairs breed in most years

Abundant - more than 1,000 pairs breed in most years

Migrants and non-breeding visitors

Accidental - each record is recounted

Occasional - individuals out of season

Rare - 10-20 records

Scarce - 21-50 individuals

Common - 51-100 individuals

Very common - 101-1,000 individuals

Abundant - more than 1,000 individuals

In practice, some of the categories have been further elaborated (e.g. fairly common) to give a better impression of status. Examination of the status on different islands shows either interesting zoogeographical patterns (e.g. Brent Goose *Branta bernicla* and Eurasian Jay *Garrulus glandarius*) or limited historical observer coverage (e.g. European Honey-buzzard *Pernis apivorus* and Little Gull *Hydrocoloeus minutus*). It is hoped that both local and visiting birders will see the gaps in the knowledge of Channel Island birds and plan their visits accordingly. Please submit all records to the relevant island's recorder.

The list

The order of this list and scientific names follow the recommendations of the British Ornithologists' Union: <http://www.bou.org.uk/british-list/> and IOC World Bird List: <https://www.worldbirdnames.org/new/>; with common names typically following Parkin, D.T. & Knox, A.G. 2010. *The Status of Birds in Britain and Ireland*. Christopher Helm, London. IUCN Red List status <http://datazone.birdlife.org/country/united-kingdom>

1. Red-legged Partridge *Alectoris rufa*

Jersey Rare, introduced (several times?), breeds occasionally. Small numbers present 2002-2004, increasing from 2005. Status since 2012 unclear but present.

Guernsey Regularly introduced – may be fairly common.

Alderney

Sark Several (failed?) introductions, most recently (successfully?) on Brecqhou with birds regularly appearing on Sark. 1 on 30/4/2006.

2. Grey Partridge *Perdix perdix*

Jersey Illegally introduced (several times?) current status unclear - 1 seen 16/7/2015.

Guernsey Regularly introduced (including recently) – not self-supporting. Small number may be present on Guernsey and Herm.

Alderney Introduced 1980, initially flourished but then last seen 5/2008. Several small scale reintroductions since, but none self-sustaining. Occasional records most years. Most recent: 4/5/2018 (2).

Sark

3. Common Quail *Coturnix coturnix*

Jersey Rare summer visitor and migrant. Occasional breeder until 1932. Escaped domestic, and possibly feral, birds confuse status. Most recent: 9/1, 16/1 and 19/5/2011 (3), 2/11/12 and 2/6/13.

Guernsey Rare, mainly spring migrant (10 records since 1969; however, 8/6/2005 was first for 10 years). Most recent: 14/10/08. Bred Herm 1906.

Alderney Formerly rare migrant. Bred 1964. Only recent records: 25/5/2018 and 7/8/20.

Sark 5 records, 29/5/1967, 7/6/72, 2/9/87, 17/6/89 and 19/4/90.

4. Common Pheasant *Phasianus colchicus*

Jersey Abundant resident, introduced (regularly!).

Guernsey Regularly introduced, including Herm and Jethou. Common resident.

Alderney Very common resident, introduced 1986.

Sark Scarce breeding resident, introduced 1968/69.

5. Brent Goose *Branta bernicla*

Jersey Very common autumn migrant and winter visitor. 3 subspecies recorded: Dark-bellied *B. bernicla bernicla* are common and Pale-bellied *B. bernicla hrota* are scarce but annual, Black Brant *B. bernicla nigricans* is a rare visitor that may stay throughout winter – most recent: 8/2, 29-30/3, 19/11/17-14/3/18 and 1/1-31/3/20.

Guernsey Common winter visitor, half of population in Herm. Most records are of *B. bernicla bernicla*; however, *B. bernicla hrota*: rare and *B. bernicla nigricans*: 3 records, 8/1-26/3/1999, 5/2-3/4/2005 and 23/12/12-31/3/13.

Alderney Scarce spring/fairly common autumn migrant and scarce winter visitor. 2 subspecies recorded and *B. bernicla hrota* 27-28/04/2016 (25) is a noteworthy record.

Sark Rare winter visitor.
